DVD Logo

Objective

To practice with conditionals, variables and operators by making a bouncing dvd logo.

Instructions

Write a program that creates a rectangle that bounces around the screen just like in this scene from The Office. It doesn't have to have the text (but would be cool) and should change colors when it hits a wall. No PImage.

Hints

Watch this <u>video</u> to understand how to get a shape to change its direction.

Challenge

Can you make it look just like the DVD Logo in the video?
